

JABBER/Telemedicine Flow for the Respiratory TENT

1. Patient is screened as positive and sent to Respiratory Tent for triage / assessment.
2. Remote provider (MD, PA, NP) participate in triage of patient with assistance from an RN via telemedicine/JABBER utilizing the IPAD.
3. Orders are placed via Haiku App or remote log in for patient treatment by provider if provider is off site. If onsite the provider places orders via EPIC in the department.
4. Patient receives treatment as directed by the physician.
5. Discharge orders are written as appropriate via app/remote log in and patient orders carried out. (If no printer is available in the TENT area then there will be a runner that can deliver the discharge orders.)
6. If patient needs admission, patient is moved to the respiratory ED and care turned over to provider in respiratory area of the ED via provider to provider communication and nursing handoff. The remote provider may remain the caring provider as long as appropriate.
