

### Donning

1. Clean hands
2. Put on yellow isolation gown, tie in front
3. Apply procedure mask to face
4. Put on face shield
5. Put on gloves

### Doffing

1. Grip gown tie with thumbs and break; then gather gown at waist and pull away from body, roll contaminated side down and away from body removing your gloves as you remove gown; dispose of gown and gloves; clean hands and exit room
2. Clean hands again outside of room
3. Remove face shield without touching the front
4. Remove procedure mask; DO NOT touch the front
5. Clean hands

### REUSE/Cleaning Of Eye Protection

- When caring for COVID + or suspected patients, Droplet/Contact/Eye Protection or Airborne/Contact/Eye Protection precautions are required.
- In effort to conserve use of PPE- Eye Protection, reuse and cleaning are measures we have implemented until supply chains are restored.
- Please follow the below steps to ensure proper cleaning of eye protection. Please be judicious in the reuse of these types of equipment.

### Eye Protection:

- Eye Protection can be cleaned using an A3 or Microkill wipe after each use

- Wipe the inside and outside of the Eye Protection, as well as the arm
- Observe proper wet times as per manufacturer's recommendations
- If the integrity of the Eye Protection is compromised – the viewing field is scratched making it difficult to see, it no longer fits tightly to your head or no longer remains in place when it is on, or any other concerns arise, please replace the Eye Protection immediately.
